Safir Performance

Hunting as a sport and a means for survival is as old as the history of humanity. While transforming from hunter-collector way of primitive life to high technological modern life, it has become an exquisite hobby and passion for millions.

Eventhough by some considered as an untastefull and harmfull act against the nature and the fauna, it is essentially one of the most efficient ways to control the natural habitat and the population of wild life. Accepting this philosophy as its vision and having a healty respect for nature and sports, Safir Arms is spending its best efforts to manufacture high-end technological products that hunting and sports enthusiasts can use and enjoy for years to come.

Hunters' Natural Choice..... It' s Unique.

Safir T 14 is an unique shotgun because it is the first smooth bore, .410 cal., semi automatic shotgun ever made, based on an assualt rifle platform. Thus we, at Safir Arms are aiming to feed the needs and necessities of hunters and sportsmen worldwide, with a different way of looking into shotguns.

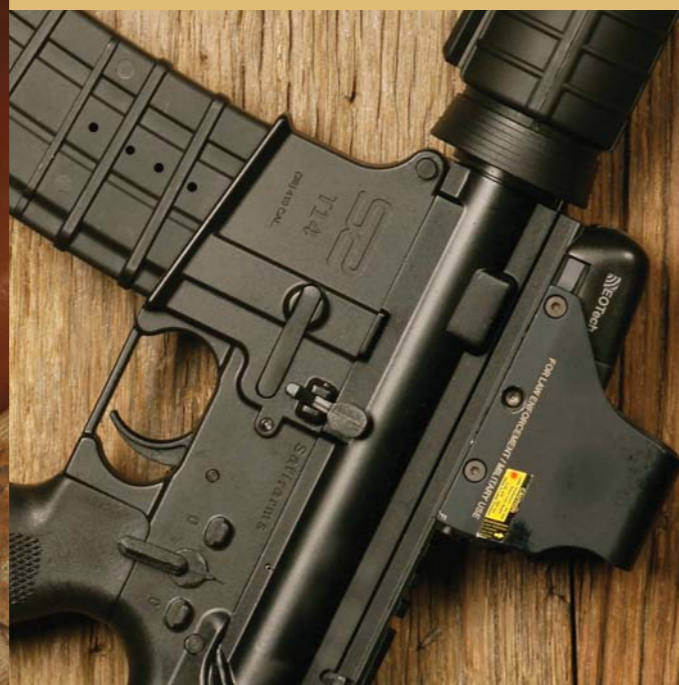

12 gauge model for outdoors persons and sports people.

Right choice of firearm

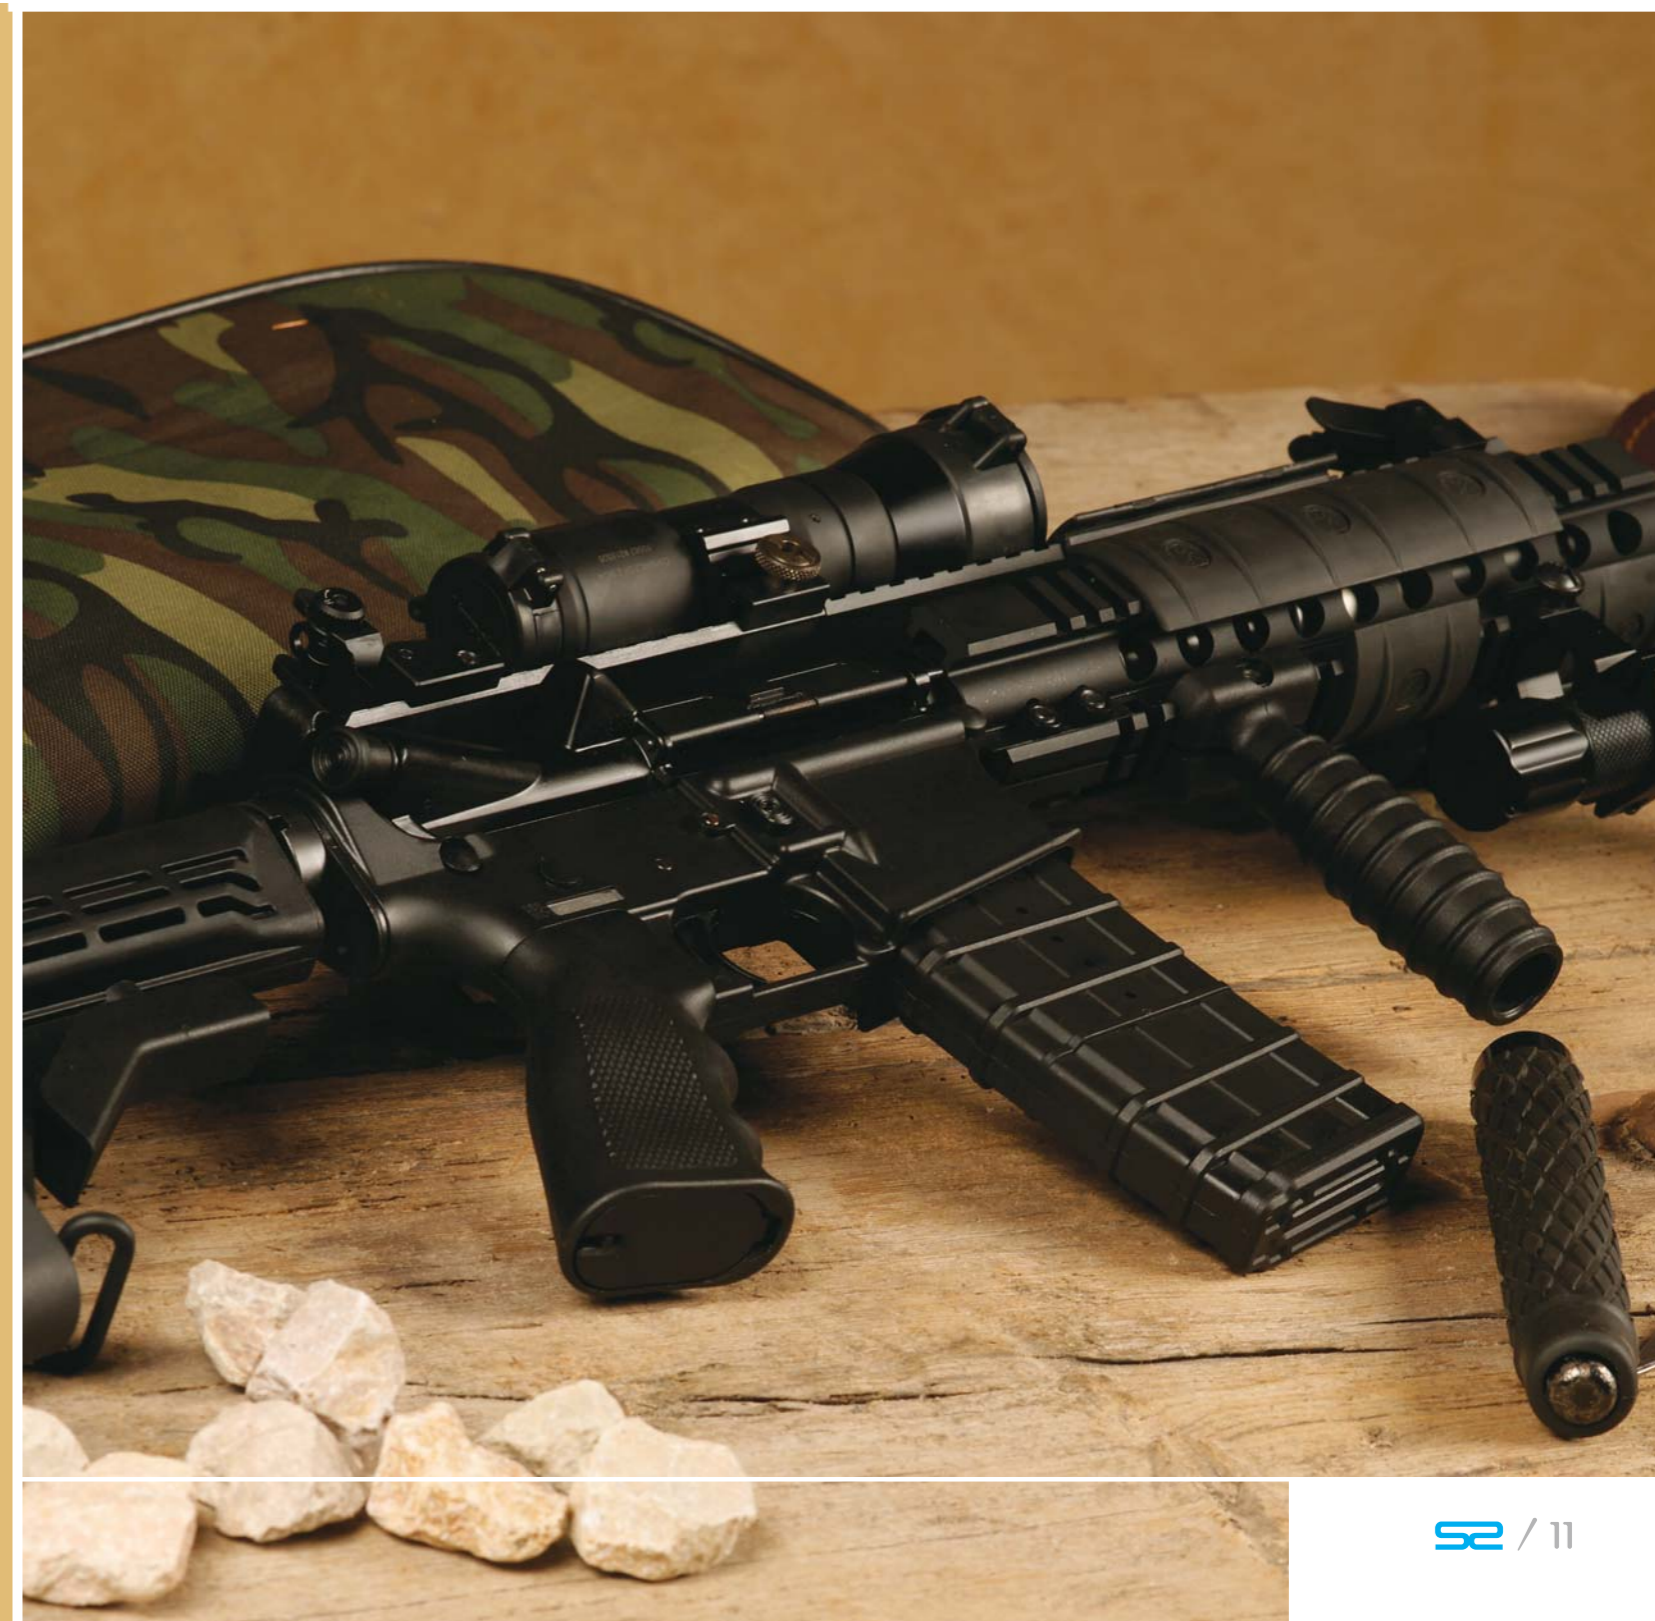

It is not important whether you choose a double barrel or a semi automatic shotgun for hunting and sports. The most important point is to have the right firearm which is most suitable with your ergonomics, than the type of the gun itself. For example ; if you have long arms a short stock shotgun will put you in trouble and be uncomfortable when shooting. On the other hand, if you are a left handed shooter a stock designed for a right handed shooter will either spoil your aim and or game. So it is obviously very important to make the right choice in then beginning.

A very effective .223 caliber defense and sporting gun that can both be manufactured for civilian and Law Enforcement and Military use. T 15 is semi automatic for civilian , T 16 is fully automatic for Law Enforcement and Military use.

*All models may be produced as Flat-Tops.
*These models are only assembled and produced in Safir Arms LLC factory in Willingboro, NJ, USA. to be sold in USA.

To get the 'bull's eye' neither the ammunition nor the gun is sufficient by itself. To get the best results, all of the following items must be correct.

- * Right choice of firearms.
- * Right choice of ammunition.
- * Correct aim.
- * Good distance estimation.

use sports model for young adults.

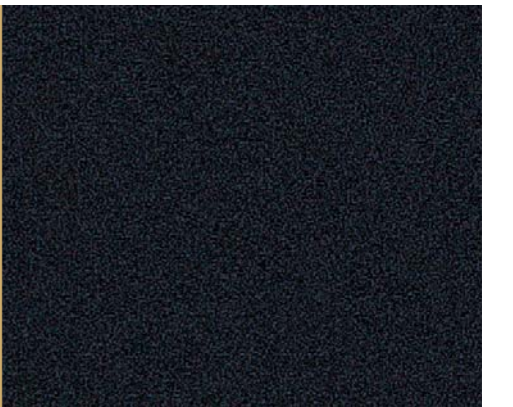

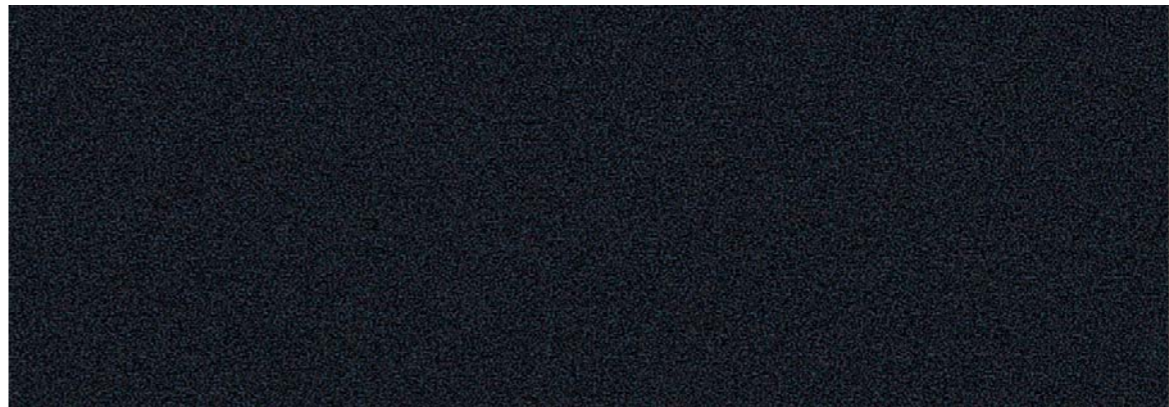

Right choice of ammunition

It is also very important to choose the correct ammo depending on the type of your shotgun and the game. Low recoil and substandard cartridges may cause malfunctioning during shooting. Always be sure that you choose the correct caliber, gauge and the shell length that fits exactly your barrel's chamber. It is not advised to use reloaded cartridges, since it is very hard to reach correct powder pressure and catch outer shell diameter.

- MEDIUM
- MEDIUM S
- COMPACT
- COMPACT S
- RIS RAIL
- RIS RAIL S

Correct aiming is a matter of knowing your gun and requires lots of practice of shooting it. Before hunting, please test your shotgun at a shooting field with different brands and makes of the exact caliber it is designed and specified for so that you can choose your optimum ammunition. While shooting, keep your left foot a bit forward, gently place the stock on your shoulder, put your head above the upperstock where you can see the sights and the target clearly. Such kind of constant practice will give you great advantage while speed aiming and shooting.

5.7 caliber top loading system
practical and very easy to use.

Good distance estimation

Distance estimation is really one of the most important issues in shooting and aiming. If you shoot at a distance which is longer than the shooting range of your shotgun or ammo, you may think that you are experiencing problems with both of them. Not to face problems as such, we advise you to test your shotgun at a shooting range with different distances so you can get yourself familiarized to estimating the distance while hunting.

www.safirarms.com

Safir Arms has been established in 2005 with 2 factory buildings and more than 100 workers in Istanbul-Turkey. We have been one of the leading arms manufacturers and exporters of Turkey with our 20 years of experience in the arms sector.

We are manufacturing 36 (410) caliber, unrifled and ungrooved semiautomatic T 14 hunting guns in Turkey which are similar in shape and mechanism to AR-15 223 Remington guns. This gun consists of 240 pieces and all of these parts are being manufactured in our factories in Turkey.

T 14 shotgun's prototype has been created after a rather long research and development process. Its patent and trademarks belong to Safir Arms, Turkey. It has been tested under various and vigorous weather conditions and after a process which took 2 years, finally T-14 hunting shotgun has been presented to the market and it was a direct hit with 15.000 shotguns around the world in 3 years. We have finished the R&D and created the prototypes on our rifled and grooved rifles T 15 and T 16 and also some other different models with the same results on our minds.

We have participated in IWA fairs in Nurnberg-Germany, EXA in Italy, ADIHEX in Abu-Dhabi in United Arab Emirates and Shotshow in USA and several gun dealers shows in USA also.

75 % of our production is being sold to the domestic Turkish market, remaining 25 % is being exported to USA, European Union (mainly Germany, Italy, Greece and Spain), all Latin American countries; as well as some Middle Eastern countries like UAE, Lebanon and Jordan, and some Far Eastern countries such as India, Tailand and New Zealand. We recently entered the CSI and Turkic Republics market by exporting to Ukraine and Kazakhstan. We are working to Export to Russian Federation too.

Safir Arms begin its production and entered the Turkish market in 2007 and began exports in 2008. In May 2008 the samples sent to ATF were found appropriate in accordance with the American sports gun Standard exports to the USA began.

Safir Arms decided to establish its own system in USA in 2010. Carefully making some feasibility studies and scouting tours in the New York area, which is the industry and transportation hub of East Coast of USA, Safir Arms established her American company Safir Arms LLC, in Fort Lee, NJ.

Feeling the need for a good factory building close to NY but also close to the technological and mechanical sectors far more refined and developed in Pennsylvania, Safir Arms opted to establish her factory in a multi-capacity building in Willingboro, Burlington County, NJ one hour away both from NY City and Philadelphia.

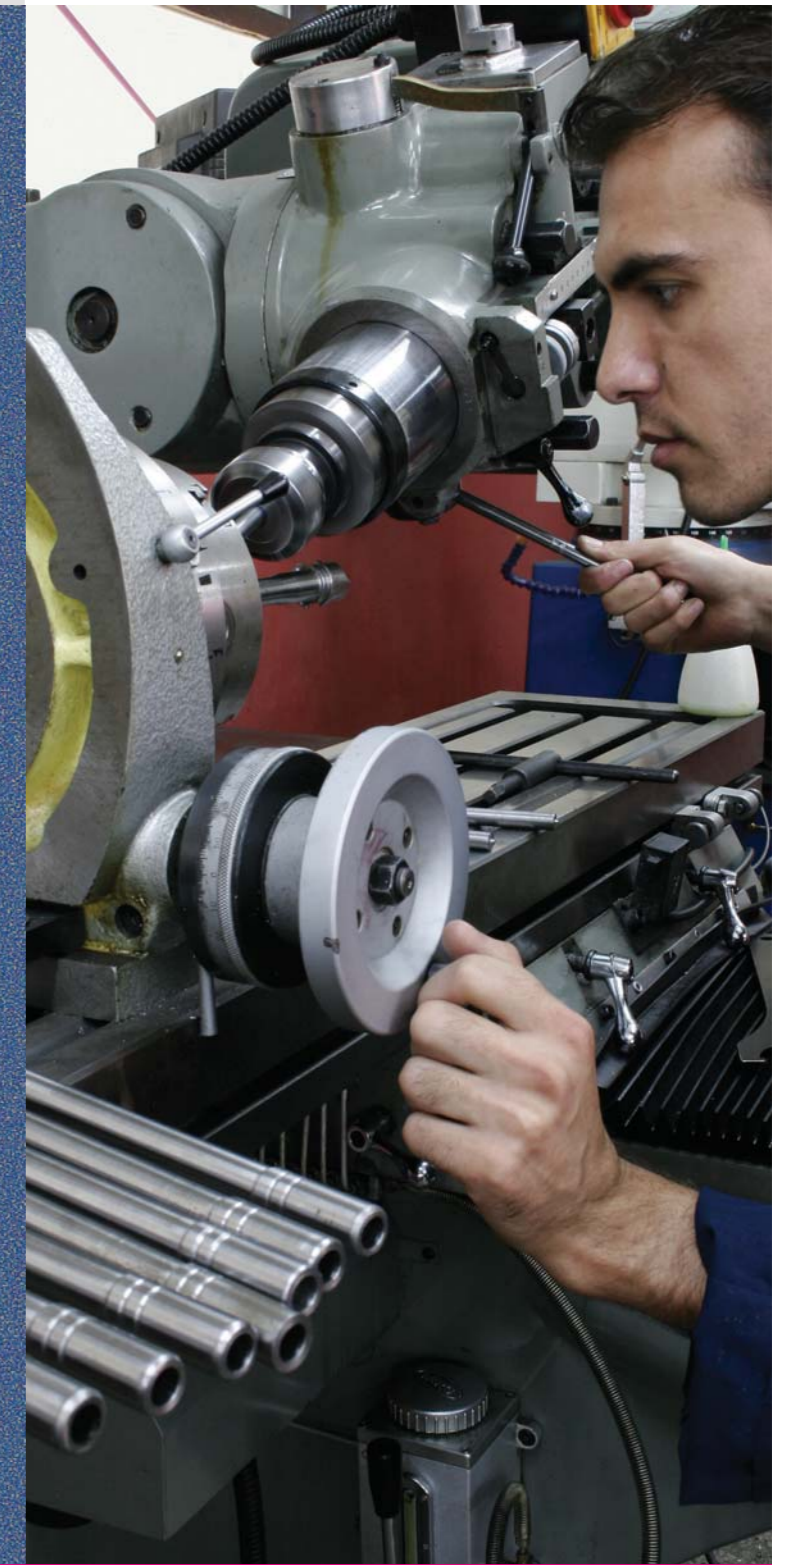

We are glad to inform that SAFIRARMS LLC. will be operational by 2011 in Willingboro, NJ.

We hope to serve you better in the States with our own import and dealing system and our service, parts and guarantee section.

We shall also be producing T 15 (our .223 cal. semiauto model) T 16 (full auto military and law enforcement version) and T 22 (our .22 rimfire model) in addition to Safir T 14 and its upper receivers.

We have plans to add .308 and 5.7 models to our armory in the very near future.

We also have in the works a 12 gauge model on the .308 platform for the very near future.
